

TX - THE TOUCH OF BROADCAST

THE TOUCH OF BROADCAST.

The TX is a multitouch mixing console with an intuitive control interface for daily operation at news desks, as co-host panels, in editing suites and in SNG vehicles. Its flat table-top design, with a 10.1" multitouch display, two assignable potentiometers and six hardware buttons, allows professional audio mixing on a small footprint.

With the integrated high-quality microphone input and headphone output, the most important connectors are available directly in the device for telephone interviews or dubbing. Featuring a built-in talkback microphone and loudspeaker, the TX is also a perfect talkback unit or monitoring controller.

A single network cable connects the TX to a core or concentrator. It transmits all audio and

control signals and also provides power for this device. The TX can be operated up to 100 m from the core.

With the Toolbox9 configuration software you can create the mixer layout that fits your workflow best. You can define the number and size of faders, buttons with your required functions and, of course, peak meters to show selected signal levels.

FEATURES

- fully customisable user interface
- 10.1 inch high-resolution multitouch display, IPS, capacitive touch screen
- 6 hardware buttons and 2 potentiometers for direct access to the most important functions
- professional microphone input and headphone output
