

TX2 - THE TOUCH OF BROADCAST

THE TOUCH OF BROADCAST.

The DHD TX2 is a multitouch mixing console with an intuitive control interface for daily operation at news desks, as co-host panels, in edit suites and in SNG vehicles. Its flat table-top design includes a 10.1-inch multitouch display, two assignable potentiometers and six silent multicolour hardware buttons, allowing professional audio mixing on a small footprint

The most important connectors are available directly in the device for telephone interviews or dubbing. These include a high-quality microphone input, headphone output, stereo speaker output and a 3.5-mm mini-jack I/O. With its built-in talkback microphone and loud-speaker, the TX2 is also a perfect talkback unit or monitoring controller.

One single network cable connects the TX2 to a core processor or concentrator. The cable carries all audio and control signals, plus power, up to 100 m from the core. The TX2 is a very useful and easy way to extend any DHD system. It can be used with XC3 or XD3 cores as stand-alone device or as part of a larger mixing system and does not require a PC for operation.

With the Toolbox configuration software you can create the mixer layout that fits your workflow best. You can define the number and size of faders, assign buttons with your required functions and, of course, select peak meters to show specific channel signal levels.

FEATURES

- Fully customisable user interface
- 10.1-inch high-resolution multitouch capacitive IPS touch screen
- 6 hardware buttons and 2 potentiometers for direct access to the most important functions
- professional microphone input and headphone output
- stereo analogue output for active speakers
- integrated talkback microphone and loudspeaker
- 3.5-mm mini-jack I/O for smartphone connection
- 1 APC port to connect to a DHD core or concentrator
- VESA 100 hole pattern on the base
- table-top design
